

P.V Manual Paste Filler

A manual paste filler is a versatile tool used for filling containers with paste-like substances, such as creams, sauces, and adhesives. The manual paste filler typically consists of a hopper to hold the paste and a nozzle for dispensing the product into containers. Operators can easily adjust the filling volume and control the flow rate, allowing for accurate and consistent filling. Applications of manual paste fillers span various industries. In the food sector, they are commonly used for filling jars with sauces, jams, and nut butters. In cosmetics, these fillers help dispense creams, lotions, and gels into jars and tubes. Additionally, they are useful in the pharmaceutical industry for packaging ointments and other medicinal pastes.

Model	PV-MPF50
Product Type	Manual Paste filler
Filling Range (ml)	5-50
Nozzle Diameter (mm)	2.5
Hopper Capacity (L)	10
Deviation (%)	2
Material	Stainless Steel
Dimension (mm)	270*270*710
Weight (Kg)	13 (Approx.)
