

P.V SEMI-AUTOMATIC CAN SEALING MACHINE

A semi-automatic can sealing machine is designed to efficiently seal metal cans commonly used in the food and beverage industries. This machine plays a critical role in ensuring the freshness and safety of products such as canned fruits, vegetables, beverages, and ready-to-eat meals. The operation begins with the manual placement of cans on the machine's platform. Once positioned, the sealing mechanism engages, applying precise pressure to secure the can lid. This process creates an airtight seal that prevents spoilage and contamination, extending the shelf life of the product.

Model	Model : PV-CSM150S
Product Type	Semi-automatic Can Sealing Machine
Bottle Diameter (mm)	39-150
Bottle Height (mm)	39-200
Capping Speed (cans/min)	15-30
Voltage (V)	240
Dimension (mm)	340*600*700 (Approx.)
Weight (Kg)	50.00 (Approx.)
