

## P.V SEMI-AUTOMATIC CROWN CAP SEALING MACHINE

A semi-automatic crown cap sealing machine is crucial for sealing glass bottles, especially in the beverage industry, which includes beer, soft drinks, and bottled water. This machine effectively seals crown caps onto bottles, ensuring a tight seal to maintain freshness and prevent contamination. The operation starts with manually placing bottles onto the machine's platform. Once positioned, the machine's sealing head engages, applying pressure to the crown cap and securely crimping it onto the bottleneck. This process not only improves product integrity but also provides consumers with a clear indication of tampering.

Model	PV-CCSM330S
Product Type	Semi-automatic Capping Machine
Cap Size	Standard
Material	Stainless Steel
Voltage (V)	240
Driven type	Pneumatic
Air Pressure	4 CFM at 6 BAR
Capping Speed (bottles/min)	10-12 (Approx.)
Dimension (mm)	300*300*400
Weight (Kg)	25 (Approx.)
