

P.V SEMI-AUTOMATIC LUG CAP SEALING MACHINE

A semi-automatic lug cap sealing machine is designed to efficiently seal containers, especially metal and plastic jars with lug caps. This machine is widely used in the food processing, pharmaceutical, and cosmetics industries, where reliable sealing is crucial for product freshness and safety. The sealing process begins with the manual placement of jars under the sealing head. Once positioned, the machine applies controlled pressure to the lug cap, creating a secure seal that prevents leakage and contamination. This method not only ensures the integrity of the product but also provides an airtight environment, prolonging shelf life.

Model	PV-LCSM90S
Product Type	Semi-automatic Capping Machine
Packaging Material	Sealing Metal Caps
Cap Size (mm)	Up to 90
Capping Speed (bottles/min)	7-8
Voltage (V)	240
Driven Type	Pneumatic
Air Pressure	4 CFM at 6 BAR
Dimension (mm)	300*300*500 (Approx.)
Weight (Kg)	25.00 (Approx.)
