

P.V SEMI-AUTOMATIC ROPP CAP SEALING MACHINE

A semi-automatic ROPP (Roll On Pilfer Proof) cap sealing machine is designed to efficiently seal bottles with ROPP caps, ensuring product integrity and safety. This machine is widely used in the beverage, pharmaceutical, and cosmetic industries where tamper-proof seals are essential. The operation begins with manually placing the bottles under the sealing head. The machine then engages, utilizing a combination of rollers and pressure to secure the cap onto the bottle neck, forming a tight seal that prevents leakage and tampering. This process not only enhances product shelf life but also provides a visual assurance of authenticity to consumers.

Model	PV-RCSM35S
Product Type	Semi-automatic Capping Machine
Cap Size (mm)	25-35
Production Capacity (bottles/min)	20-24 (Approx.)
Material	Mild Steel
Voltage (V)	240
Dimension (mm)	590*250*980
Weight (kg)	18 (Approx.)
